Application Training Placement – Erasmus+ Mobility

Dear Mrs. Barát,

at first I will begin with some information about myself. I am 20 years old and live in a town called xxxxxxxxxxxxxxxxxxxx in the very north of the state North Rhine-Westphalia in Germany. The next biggest town is Osnabrück, which is about 20 kilometers away. Osnabrück is also the place where I do my apprenticeship at the Volkswagen Osnabrück GmbH.

I live in a little housing estate in the south of xxxxxxxxxxxxxxxxxxxx together with my parents and my younger brother. My father and my brother work at Volkswagen Osnabrück GmbH as well. My mum is a nurse at a hospital.

In the right picture you can see our house with our

garden. In my free time I like to exercise at the gym, take photos with my DSLR, go wakeboarding in the summer or play ice hockey in the winter. I really like cars and also work on them in my free time and visit car exhibitions like the Essen Motor Show or go to motor

racing events with my cousin. He is an amateur racing driver and I help him with preparing the car before events or repairing it afterwards. In the picture on the left you can see the car we were racing with.

I also participate in the voluntary fire brigade in xxxxxxxxxxxxxxxxxxxx.

In the next paragraph I will tell you more about my apprenticeship at the Volkswagen Osnabrück GmbH.

The Volkswagen Osnabrück GmbH was founded in 2009 as a sub company of the Volkswagen AG after the former company Karmann got bankrupt and Volkswagen bought the facility in Osnabrück. Since then cars like the Volkswagen Golf Cabriolet, the Porsche Cayenne, Cayman and Boxster, the Volkswagen Tiguan and

the Skoda Karoq were built in Osnabrück. The facility is known for its expertise in Cabriolets and cars with low production numbers like the Volkswagen XL1, the most fuel efficient car in the world.

In my first year at Volkswagen I have been in a special workshop for apprentices in which we learned the basics about the mechanics and electronics of a car and were able to do simple work on the cars specifically provided to the apprentices. In the second year we worked in various departments to learn about the many different steps required to develop

and build a car. In the summer of 2019 a group of 8 apprentices from different professions, including me, got the chance to construct and build their very own car in the size of a bobby car. It was powered by a cordless drill and controlled with an Arduino and remote control. The car was able to go up to 45km/h and tow over

200kg. The bobby car was built for a competition of Volkswagen apprentices in Hannover. Our team won the competition which was a big surprise for us.

I will be working in different departments until the end of my apprenticeship in the beginning of 2021.

My motivations for the internship are new experiences at interesting places, learning new skills in a foreign company, improving my social skills by connecting with new people and improving myself in speaking English. I am really looking forward to this internship because I think this program has got a lot to give.

Yours faithfully
